

BURIED TREASURE
TIBOR FISCHER

on Samuel Selvon's
'The Lonely Londoners'

This was given to me with high praise by a Trinidadian friend who doesn't like to read much, so I was prepared for something special. He scrawled a dedication to me and the words "there's a lot of truth here", and I think he's right. First published in 1956, it's a portrait of the Windrush generation at work and at play in the imperial capital. Unlike his plodding compatriot VS Naipaul, Selvon has a tangy prose, which while it doesn't descend into full-scale patois, gives the novel an idiosyncratic flavour. It doesn't romanticise the lives of West Indian immigrants in the peapots, but it's a light, entertaining and very likeable book. *The Lonely Londoners* (Longman Caribbean Writers) has been in and out of print over the years, so although not truly a buried treasure, it's certainly a treasure that deserves to be more widely cherished. I don't know anyone who's read it who hasn't warmed to the characters.

Tibor Fischer's new novel is 'Yoyage to the End of the Room' (Chatto & Windus)

JOHN GRAY

Who Killed Daniel Pearl?

By Bernard-Henri Lévy

DUCKWORTH £20 (339pp) £18
(plus £2.25 p&p per order)
from 0870 800 1122

If the influence of intellectuals is measured by the hatred they inspire, Bernard-Henri Lévy must be one of the most influential alive. It seems that no one can write about BHL – a uniquely French intellectual working at the intersection of politics, journalism and the academy – without dilating on his glamorous good looks, "sumptuous" apartment and "pouting" actress-wife. The rant appears most splenic in Britain, where there is no thinker with a comparable public profile and philosophers affect a certain pride in obscurity. The reaction against Lévy is little less venomous in France.

No doubt sheer jealousy accounts for much of the spleen, but that can hardly be the whole story. Lévy first came to notice in the mid-Seventies as the leading figure of the "new philosophers", who turned against Marxism when it was still the official creed of a large part of the French intelligentsia. In *Barbarism with a Public Face* he renounced his youthful Marxist-Leninist convictions and recounted the colossal costs of the Soviet experiment.

Lévy's unfashionable anti-communism earned him the undying hatred of the French intellectual left. Yet his view of the Soviet Union was

Bernard-Henri Lévy with his actress wife Arielle Dombasle

This nexus threatens an era of terrorism, in which suicide warriors will come equipped with nuclear devices. In Lévy's view, Pearl's death was "the beginning of the grand struggle of the century".

In some ways, this is a compelling tale. Lévy is hardly the first to suggest links between Pakistani intelligence and radical Islam: there is evidence the ISI played a pivotal role in establishing the Taliban in Afghanistan. Pakistan could become the world's first nuclear-equipped failed state. It presents a greater danger than North Korea, and incomparably more than Saddam's Iraq.

The trouble is that these facts and judgements do nothing to support Lévy's account of the reasons behind Pearl's murder. He describes this book as a *romanquête* – a cross between a novel and a piece of

investigative journalism. In a context such as this, though, blurring fact with fiction is singularly unhelpful.

The reader needs to be told what is known and what is hypothesised. What exactly did Pearl find out, and when? When, and why, was the decision made to murder him? These may well be unanswerable questions, but if so Lévy had best admit it, otherwise the reader is left frustrated – and Lévy's critics vindicated. By boldly mixing genres in this fascinating book, he has handed his many enemies another stick with which to beat him. An intriguing experiment on an important theme, *Who Killed Daniel Pearl?* would be more satisfying if it had been written as straight journalism.

John Gray's 'Straw Dogs' is published by Granta
